A spark plug (sometimes, in British English, a sparking plug, and, colloquially, a plug) is a device for delivering electric current from an ignition system to the combustion chamber of a spark-ignition engine to ignite the compressed fuel/air mixture by an electric spark, while containing combustion pressure within the engine. A spark plug has a metal threaded shell, electrically isolated from ...

Piezo ignition is a type of ignition that is used in portable camping stoves, gas grills and some lighters, and potato cannons. Piezo ignition uses the principle of piezoelectricity, which, in short, is the electric charge that accumulates in some materials in response to high pressure. It consists of a small, spring-loaded hammer which, when a button is pressed, hits a crystal of PZT or quartz ...

The flame propagation stage is from spark ignition to the crank angle of CA<sub>ko</sub> (the onset of pressure oscillation), reaching the value of P<sub>ko</sub>. The heat release rate shows an increasing tendency generally during

this stage, with possibly a short term drop caused by the downward movement of the piston and heat transfer.

4 In spark ignition engines, air and fuel are usually mixed prior to entry into the cylinder. Fuel-Air Mixing The ratio of mass flow of air to the mass flow of fuel must be held roughly constant at about 15 for proper combustion. Conventionally, a mechanical device known as a carburetor is used to mix fuel and air.

compression of the fuel/air mixture limits the compression ratio of the engine -- if it compresses the air too much, the fuel/air mixture spontaneously ignites and causes knocking. Because it causes excessive heat,
