BEHAVIOUR OF OFF-SHORE STRUCTURES

The 1994 Conference on the Behavior of Offshore Structures (BOSS) is concerned with the design, construction, and installation of structures used for the development of offshore oil and gas fields.

Assessment of the Dynamic Behaviour of Saturated - The fatigue life of offshore wind turbines strongly depends on the dynamic behaviour of the structures including the underlying soil.

Građevinar 112014 GRAĐEVINAR 66 (2014) 11, 981-986 985 Corrosion effects on structural behaviour of jacket type offshore structures a greater area compared to the intact model. As can be seen in Figure 6, first three mode shapes of the intact model are obtained by modal analysis using the ABAQUS finite element analysis program.

Corrosion effects on structural behaviour of jacket type

The fixed platform is economically feasible for installation in water depths up to 500m. These template type structures will be fixed to seabed by means of tubular piles either driven through legs of the jacket (main piles) or through skirt sleeves attached to the bottom of the jacket.

Fatigue Behaviour of Offshore Structures. These structures are continuously subjected to environmental loading because of waves, wind and current. A response analysis is required to assess the safety of offshore structure under severe storm conditions as well as for estimation of damage caused by less severe but more frequently occurring sea states.

Offshore Structure Design And Construction

According to the recommendations of the API code (API 1993), 2% material damping was applied in the global (jacket) dynamic analysis carried out as the first stage of the analysis of the offshore structure. A damping level of 5% of critical damping was included in the analyses of plate and tube members.

4.13.4.5 Cathodic Protection. Offshore structures, ships, chemical plants, underground structures, etc., are usually protected by cathodic protection. How cathodic protection influences initiation and progress of CF is an important question, especially in the case of high-strength materials sensitive to hydrogen embrittlement.
